

RMS

Teltonika Networks Remote Management System (RMS) is an all-in-one user-friendly IoT platform providing a smart way to stay on top of your whole connected solution completely remotely, securely, and reliably. To fit the requirements of different user profiles, we offer various functionalities of RMS available separately, so you may choose only what your business needs and save on costs.

REMOTE MANAGEMENT SYSTEM

MANAGEMENT

RMS MANAGEMENT gives you full control over your fleet of Teltonika Networks routers and gateways, ensuring their security and availability. RMS offers many features to save your time and expenses while managing everything remotely – even without a public IP!

CONNECT

RMS CONNECT is a unified access system, which allows you to reach and control smart devices remotely via RMS. If your PLC, Industrial PC, CCTV camera, Point of Sale system or other intelligent device is reachable by one of RMS compatible routers or gateways, you can access it with RMS CONNECT without a public IP or additional VPN services!

VPN

We know how excruciating it may be to manage large-scale networks containing various devices. We designed RMS VPN to offer the easiest way of setting up VPN connections to your whole infrastructure. Now you may remotely, simply, and securely reach multiple endpoints at the same time without the need to worry about configuring different protocols or setting up dedicated VPN servers. RMS will take care of all of this for you!

API

What could be more efficient than having a single software system for your whole connected solution infrastructure? With our RMS API you can get just that! RMS API allows your IoT Platform to directly interact with RMS and get the exact data and functionality you need. Just like with other RMS services we want to give you full control of your solution and RMS API brings that to another level!

BENEFITS

EFFICIENT LARGE SCALE NETWORK MANAGEMENT

REALTIME ALERT SYSTEM

ACTIVITY REPORTS

CONSTANT UPDATES

NO PUBLIC IP NEEDED

REMOTE ACCESS TO NON TELTONIKA NETWORKS DEVICES

COMPATIBILITY WITH VARIOUS OS

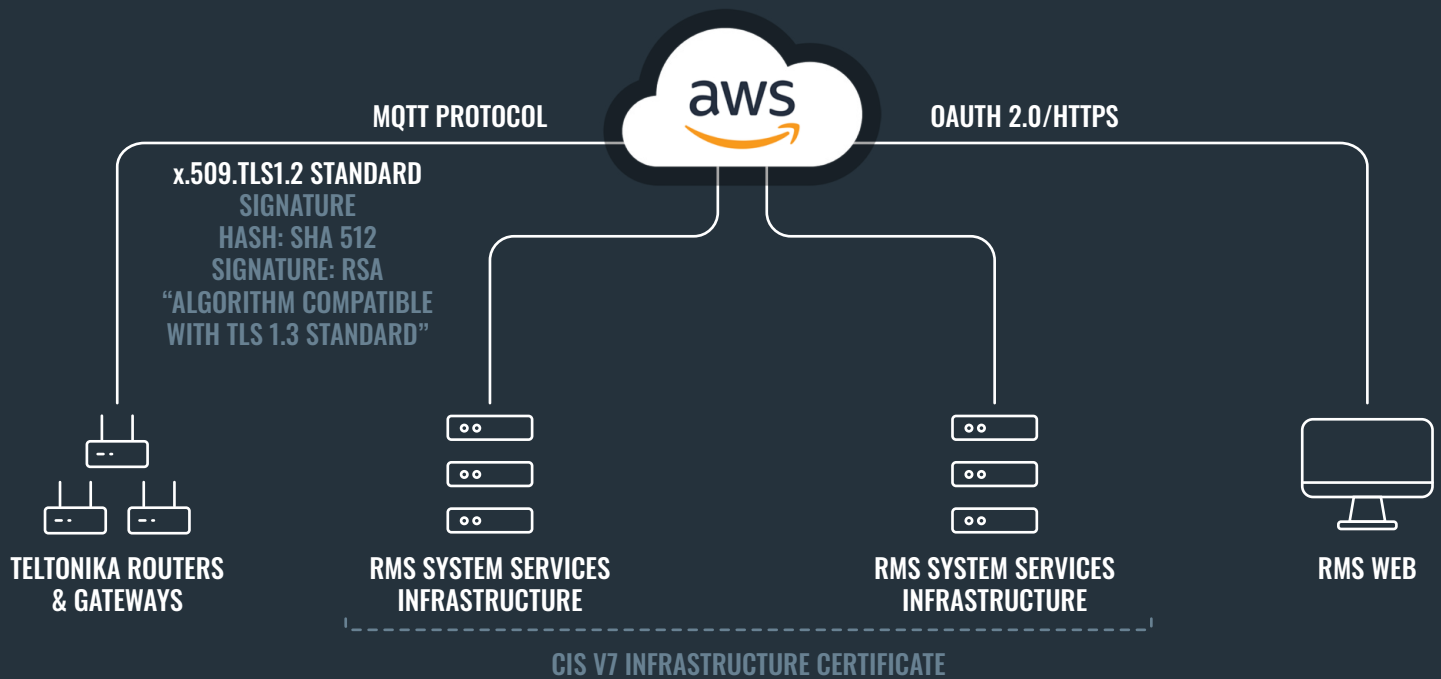

DEVICE MULTI-CONFIGURATION

SECURITY FIRST

SECURITY

Security is the top priority for all Teltonika Networks products, and our Remote Management System (RMS) is no exception. RMS is a cloud-based platform used by thousands of businesses globally every day. The system runs on AWS – arguably the safest cloud available today while our routers and gateways communicate with the RMS platform via TLS protected MQTT protocol. Encrypted communication & two-way authentication ensures that no one will be able to gain unauthorized access to your RMS data!

PRICING

You may unlock different RMS services with RMS credits acquired from us or any of our RMS resellers. We offer a free 30-day trial for every new device so you can try RMS Management free of charge for one month! Alternatively, just get in touch and we will find the best pricing option for you.
